	Madison	359	6
	McDowell	1,353	32
	Mitchell	246	4
	Rutherford	1,780	64
	Yancey	333	1

It was only a couple of weeks ago that the United States hit 8 million cases of COVID-19. Now, as cases surge across the country, the mark stands at 9 million, according to Johns Hopkins University.

The United States set yet another pandemic record with more than 90,000 new [Covid-19](#) cases reported in a single day.

The virus is spreading at such a fast clip now that for the first time, new cases were being diagnosed at faster than one every second on Thursday, Johns Hopkins data shows. The U.S. reported 88,521 new coronavirus cases, a record for one day. That equaled a new coronavirus case every 0.976 seconds.

With Thursday's data, the United States also set a record for new cases in a week, at 536,131. The second-highest record was set in the week ending Wednesday. The third, Tuesday. The fourth, Monday. The fifth highest record, Sunday. The sixth-highest record was set in the week ending July 22.

The surge is nationwide: 47 states had more cases in the latest week than in the week before.
